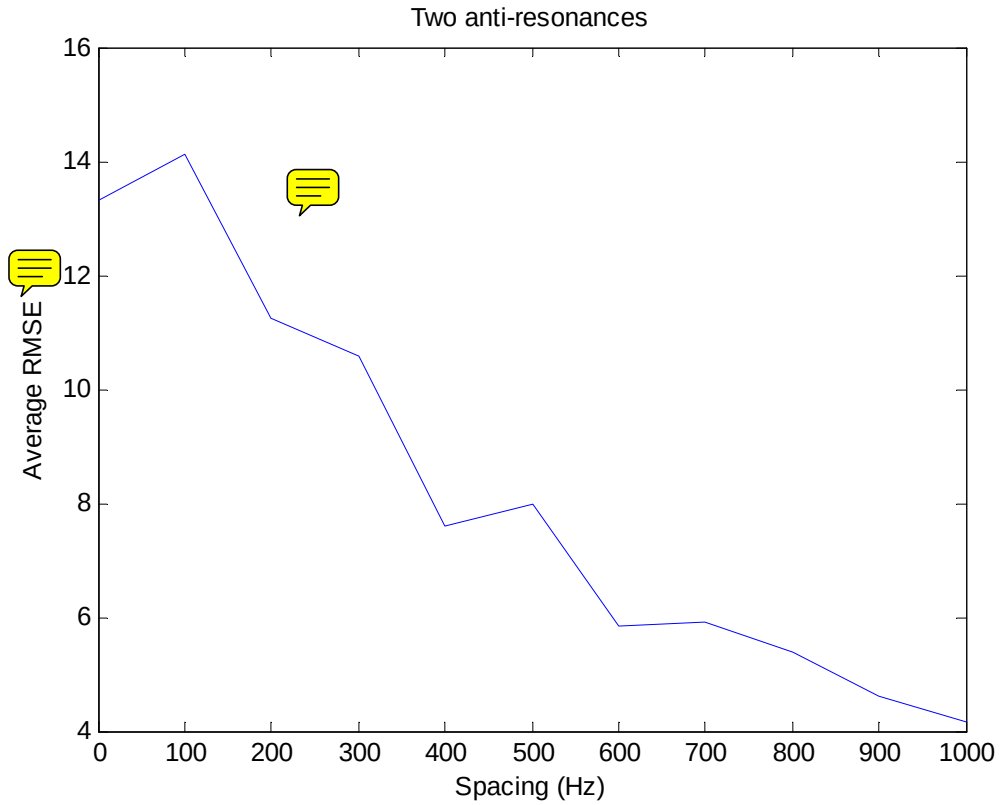
Mean RMSE vs. Frequency spacing (Hz)

Two anti-resonances (and one resonance)

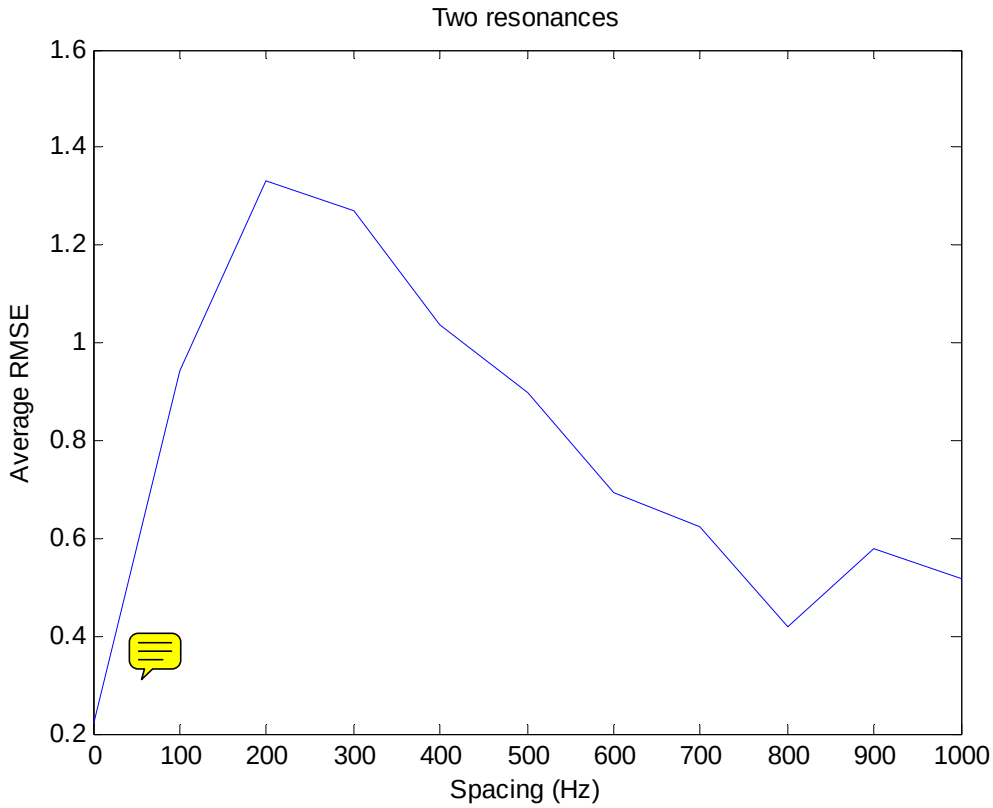
```
F = 500; Fbw = 100;
Z1 = 1000; Z2vect = 2000:-100:1000;
Zbw = [100 100]';
dur = .5; % in s
pNoiseVar = 10;
snr_dB = 25;
cepOrder = 15;
fs = 16e3;
plot_flag = 0;
algFlag = [0 1]; % Select 1 to run, 0 not to; [EKF EKS]
x0 = [F; Z]+0;
```



Mean RMSE vs. Frequency spacing (Hz)

Two resonances

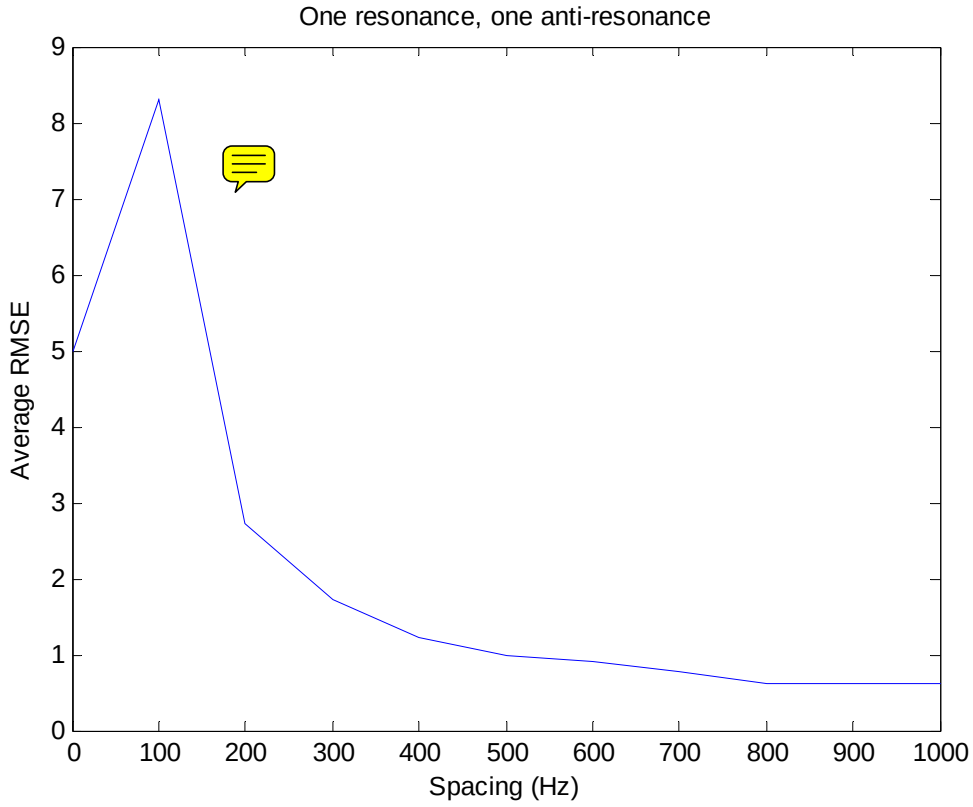
```
%% parameters for pole/pole
F1 = 1000; F2vect = 2000:-100:1000;
Fbw = [100 100]';
Z = []; Zbw = [];
dur = .5; % in s
pNoiseVar = 10;
snr_dB = 25;
cepOrder = 15;
fs = 16e3;
plot_flag = 0;
algFlag = [0 1]; % Select 1 to run, 0 not to; [EKF EKS]
x0 = [F; Z]+0;
```



Mean RMSE vs. Frequency spacing (Hz)

One resonance, one anti-resonance

```
%% parameters for pole/zero
F = 1000;
Fbw = [100]';
Zvect = 2000:-100:1000; Zbw = [50];
dur = .5; % in s
pNoiseVar = 10;
snr_dB = 25;
cepOrder = 15;
fs = 16e3;
plot_flag = 0;
algFlag = [0 1]; % Select 1 to run, 0 not to; [EKF EKS]
x0 = [F; Z]+0;
```

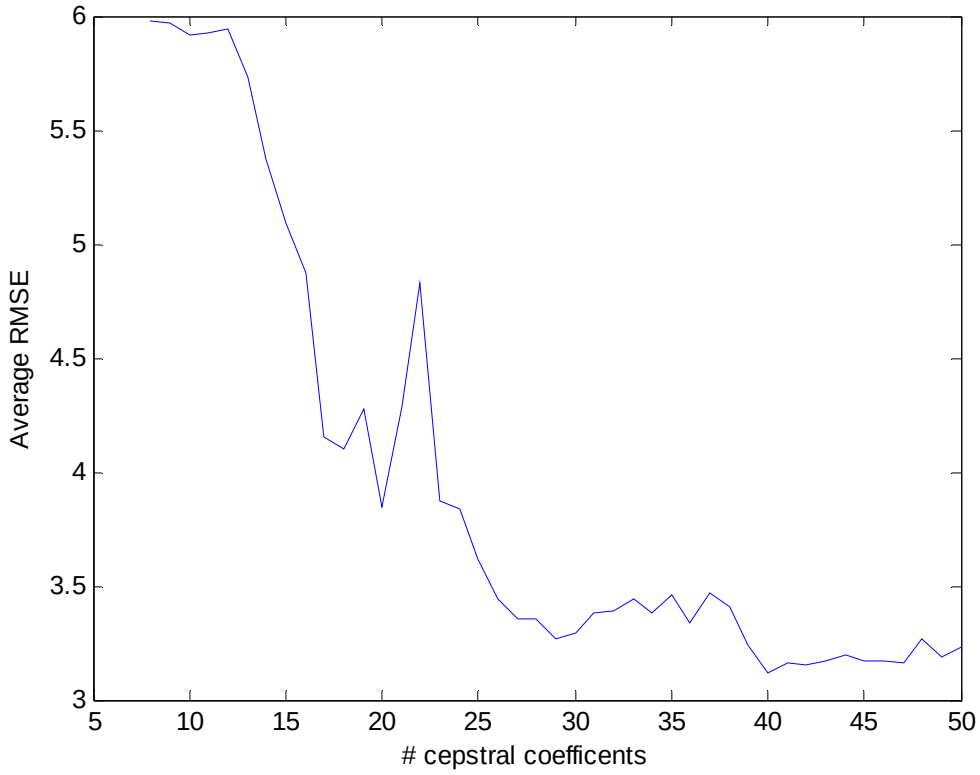


Mean RMSE vs. # Cepstral coefficients

Three resonances, one anti-resonance

```
F = [500 1500 2500]';
Fbw = [100 100 100]';
Z = [700]'; Zbw = [50]';
dur = .5; % in s
pNoiseVar = 10;
snr_dB = 25;
cepOrder_vect = 50:-1:8;
fs = 16e3;
plot_flag = 0;
algFlag = [1 0]; % Select 1 to run, 0 not to; [EKF EKS]
x0 = [F; Z]+100;
```

Takes 6 s to run each simulation.

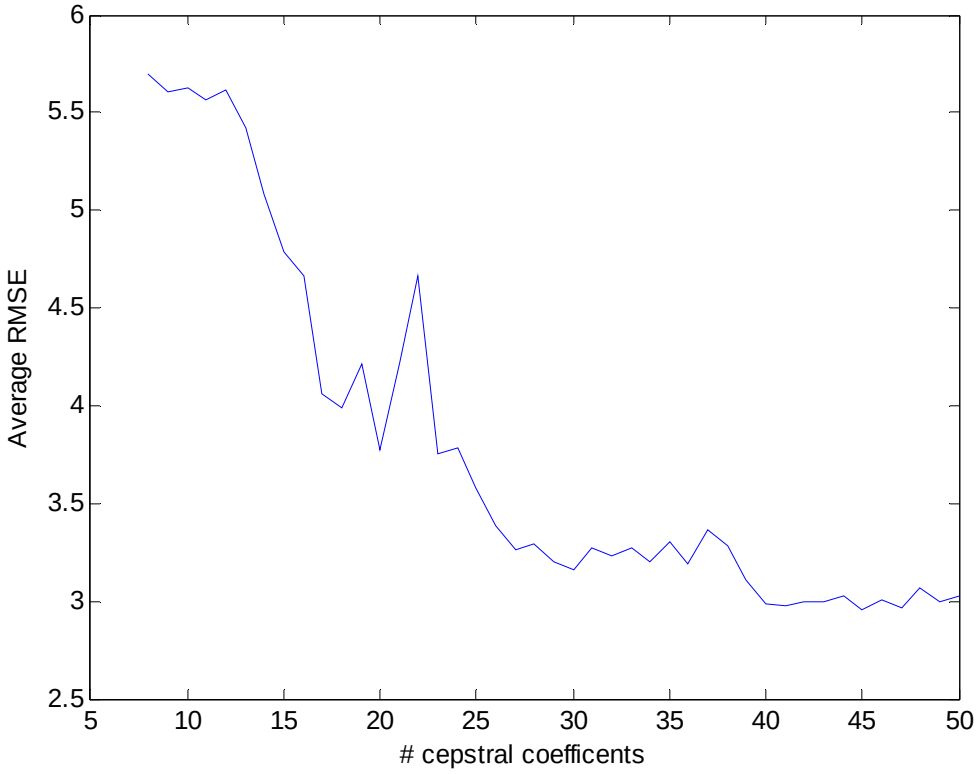


Mean RMSE vs. # Cepstral coefficients

Four resonances, one anti-resonance

```
%% parameters
F = [500 1500 2500 3500]';
Fbw = [100 100 100 100]';
Z = [700]'; Zbw = [50]';
dur = .5; % in s
pNoiseVar = 10;
snr_dB = 25;
cepOrder_vect = 50:-1:8;
fs = 16e3;
plot_flag = 0;
algFlag = [1 0]; % Select 1 to run, 0 not to; [EKF EKS]
x0 = [F; Z]+100;
```

Takes 6 s to run each simulation.

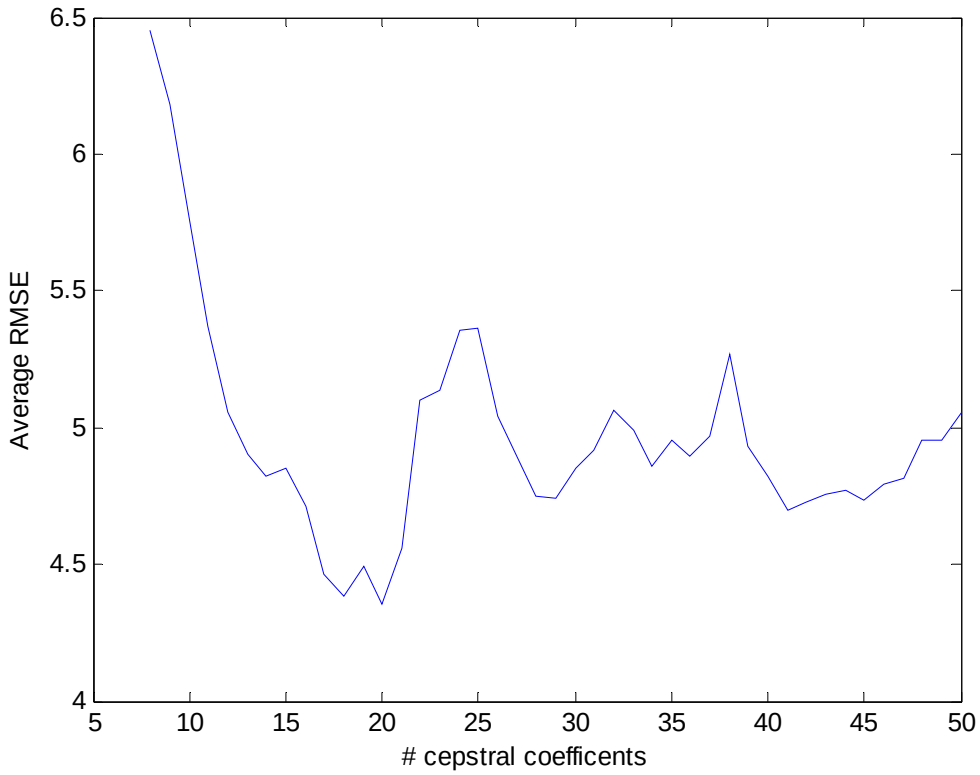


Mean RMSE vs. # Cepstral coefficients

Four resonances, Two anti-resonances

```
%% parameters
F = [500 1500 2500 3500]';
Fbw = [100 100 100 100]';
Z = [700 1300]'; Zbw = [50 50]';
dur = .5; % in s
pNoiseVar = 10;
snr_dB = 25;
cepOrder_vect = 50:-1:8;
fs = 16e3;
plot_flag = 0;
algFlag = [1 0]; % Select 1 to run, 0 not to; [EKF EKS]
x0 = [F; Z]+100;
```

Takes 7.3 s to run each simulation.



NB: for all plots above:

```
wType = 'hamming';  % window type
wLengthMS  = 20;    % Length of window (in milliseconds)
wOverlap = 0.5;     % Factor of overlap of window
lpcOrder = length(F)*2;       % Number of LPC coefficients
zOrder = length(Z)*2;         % Number of MA coefficients
peCoeff = 0;     % Pre-emphasis factor
```

Overlap-Add Analysis/Synthesis

Sinewave modulation (3 pole pairs, 1 zero pair)

```
